

IN THE ABSTRACT

Please amend the Abstract as follows:

The present invention relates to a muscular strength enhancing agent produced from fruits, and provides a strength enhancing or body-fat regulating agent, derived from natural products, that may enhance muscle strength, decrease body fat or suppress body-fat accumulation without decreasing the amount of skeletal muscle or the weight of viscous; more specifically, a polyphenol produced from fruits is used to provide muscular strength enhancing agents or body-fat regulating agents, food/beverages and pharmaceuticals that may enhance muscular strength, decrease body fat or suppress body-fat accumulation. Strength enhancing agents or body fat regulating agents effective to enhance muscular strength, of which active component being a polyphenol derived from fruits, and food/beverages and pharmaceuticals containing them.
